To calculate total commercial aquaculture feed use globally, Tacon and Metian (2015) multiplied aquaculture production for each species by the percent of each species on commercial feed and the efficiency that fish convert feed into mass (i.e., feed conversion ratio). We have reproduced these data in Fig. 1 for the top five species groups to show the different rates of change for each variable

Agriculture is the science and art of cultivating plants and livestock. Agriculture was the key development in the rise of sedentary human civilization, whereby farming of domesticated species created food surpluses that enabled people to live in cities. The history of agriculture began thousands of years ago. After gathering wild grains beginning at least 105,000 years ago, nascent farmers ...

4. Are genetically modified plant foods safe to eat? 4.1 Foodstuffs made of genetically modified crops that are currently available (mainly maize, soybean, and oilseed rape) have been judged safe to eat, and the methods used to test them have been deemed appropriate. These conclusions represent the consensus of the scientific evidence surveyed by the International Council for Science and are ...

Scientific Facts on Genetically Modified Crops

The environmental impact of agriculture is the effect that different farming practices have on the ecosystems around them, and how those effects can be traced back to those practices. The environmental impact of agriculture varies based on the wide variety of agricultural practices employed around the world. Ultimately, the environmental impact depends on the production practices of the system ...
