Equivalence & Invariants • Equivalent submanifolds  $N \approx N$  must have the same invariants:  $I = I$ . Constant invariants provide immediate information: e.g.  $\kappa = 2 \Leftrightarrow \kappa = 2$  Non-constant invariants are not useful in isolation, because an equivalence map can drastically alter the dependence on the submanifold parameters: e.g.  $\kappa = x^3$  versus  $\kappa \dots$
