

Fluid Catalytic Cracking V Materials And Technological Innovations

Fluid Catalytic Cracking V Materials

Fluid catalytic cracking (FCC) is one of the most important conversion processes used in petroleum refineries. It is widely used to convert the high-boiling, high-molecular weight hydrocarbon fractions of petroleum crude oils into more valuable gasoline, olefinic gases, and other products. Cracking of petroleum hydrocarbons was originally done by thermal cracking, which has been almost ...

Fluid catalytic cracking - Wikipedia

The catalytic cracking process involves the presence of solid acid catalysts, usually silica-alumina and zeolites. The catalysts promote the formation of carbocations, which undergo processes of rearrangement and scission of C-C bonds. Relative to thermal cracking, cat cracking proceeds at milder temperatures, which saves energy.

Cracking (chemistry) - Wikipedia

The aim of this research was to study fuel oil production from municipal plastic wastes by sequential pyrolysis and catalytic reforming processes.

Fuel Oil Production from Municipal Plastic Wastes in ...

1. Introduction. Plastics play a major role in our daily lives and our ever growing dependency on them is justified by their versatility, light weight and low production cost relative to other classical materials such as wood, concrete and metal.

A review on thermal and catalytic pyrolysis of plastic ...

Gerald S. Frankel is Distinguished Professor of Engineering in Materials Science and Engineering and Director of the Fontana Corrosion Center at the Ohio State University. He earned the Sc.B. degree in Materials Science Engineering from Brown University and the Sc.D. degree in Materials Science and Engineering from MIT.

Another example is the catalytic cracking of gas oil to produce alkenes (ethene and propene) and petrol with a high octane rating.. Figure 7 A catalytic cracker as used to produce alkenes from gas oil. A silica-alumina catalyst is used but fine particles of carbon are rapidly deposited on its surface and the catalyst quickly becomes ineffective.
