The phonological loop is the part of working memory that deals with spoken and written material. It consists of two parts (see Figure 3). The phonological store (linked to speech perception) acts as an inner ear and holds information in a speech-based form (i.e., spoken words) for 1-2 seconds. Spoken words enter the store directly.

In psychology and cognitive science, a memory bias is a cognitive bias that either enhances or impairs the recall of a memory (either the chances that the memory will be recalled at all, or the amount of time it takes for it to be recalled, or both), or that alters the content of a reported memory. There are many types of memory bias, including:

Sex differences in human physiology are distinctions of physiological characteristics associated with either male or female humans. These can be of several types, including direct and indirect. Direct being the direct result of differences prescribed by the Y-chromosome, and indirect being a characteristic influenced indirectly (e.g. hormonally) by the Y-chromosome.

Ingelheim, Germany, 09. February, 2018 - Boehringer Ingelheim today announced that their Phase II Alzheimer's disease trials with investigational compound BI 409306 had not met their efficacy endpoints and plans for further trials with BI 409306 in AD will therefore not be pursued. Instead, the company will refocus efforts on the ongoing schizophrenia trials with this compound.
