The M16 Weapon

The M16 rifle, officially designated Rifle, Caliber 5.56 mm, M16, is a family of military rifles adapted from the ArmaLite AR-15 rifle for the United States military. The original M16 rifle was a 5.56mm automatic rifle with a 20-round magazine. In 1964, the M16 entered US military service and the following year was deployed for jungle warfare operations during the Vietnam War.

The LWRCI UICW is about as compact as an MP5 9x19mm sub-machine gun but carries the punch of the 5.56x45mm NATO round. Another advantage of using a M16-based design is that UKSF soldiers have already developed muscle-memory from operating their M16-based L119A2 carbines. The UICW is small enough to be carried concealed in a backpack or under some types of jacket.
