

Understanding Digital Cinema

Understanding Digital Cinema

Digital cinema refers to the use of digital technology to distribute or project motion pictures as opposed to the historical use of reels of motion picture film, such as 35 mm film. Whereas film reels have to be shipped to movie theaters, a digital movie can be distributed to cinemas in a number of ways: over the Internet or dedicated satellite links, or by sending hard drives or optical discs ...

Do you know what the difference is between a good photographer and a great one? It's light. Or rather, the way the photographer uses light. A good photographer knows how to compose an image, how to angle her camera so the viewer gets a completely unique perspective of an object, how to capture an event in an interesting and unusual way - even how to capture an emotion.

So a histogram with lots of dark pixels will be skewed to the left and one with lots of lighter tones will be skewed to the right. The beauty of a histogram is that the small LCD display on your camera is not really big enough to give you an great review of a picture and you can often get home to find that you've over or under exposed an image.

Digital Light Processing (DLP) is a set of chipsets based on optical micro-electro-mechanical technology that uses a digital micromirror device. It was originally developed in 1987 by Larry Hornbeck of Texas Instruments. While the DLP imaging device was invented by Texas Instruments, the first DLP-based projector was introduced by Digital Projection Ltd in 1997.
